## John Zink Company Featured in Public Television Series

**TULSA, Okla. (October 10, 2002)**— John Zink Company and its contribution to the advancement of pollution-control technologies are the subjects of an upcoming segment of *American Environmental Review (AER)*. The television series, hosted by CBS News Correspondent Morley Safer, is fed to 345 Public Television affiliate stations nationwide and to more than 127 countries. The John Zink segment may also be viewed at [www.johnzink.com](http://www.johnzink.com).

“Participating stations have the right to broadcast the *AER* segment featuring John Zink Company for a full year beginning in November,” said Karla Sullivan, project manager for *AER*. “The segment focuses on the impact of Zink’s breakthrough, advanced combustion processes that allow global industry to significantly lower harmful emissions in a cost-effective manner. The segment also features an interview with one of the world’s foremost combustion and environmental experts, Adel F. Sarofim, Ph.D., presidential professor of the College of Engineering at the University of Utah.”

“*American Environmental Review* features companies, associations and organizations whose products or services have significantly contributed on a national and/or international level to the advancement of environmental technology and information, and whose story merits this type of global attention,” said Ed Shaland, associate producer for *AER*.
